

What is the [\\$CIRCUS](#)?

The Proton Clown Circus is a partnership between Proton Baby Clowns and Proton Clown. Proton Baby Clowns are a fully liquid NFT project that's backed by \$XPR and [\\$CIRCUS](#). [\\$CIRCUS](#) has 100m fully minted supply, with 0% inflation and distributed 50% to our sister project Proton Clown. 🎪👉

We set special edition baby clown and clownverse collectible drop prices to 500 XPR and generic drop prices to 250 XPR. All Clowns are initially sold at auction, and if there are no bidders, are listed at their respective starting bid price. 🎪🔨

We keep the drop prices low so the chance of flipping our NFTs is higher. 💧

50% of Proton Baby Clown primary sales go to the \$CIRCUS treasury. A portion of Proton Clown sales goes to the circus.xpr treasury (at Kleist/@AmmerTechnologiesAG's discretion). Proton Baby Clown is @notbob1's project, Proton Clownverse Collectibles (miscellaneous clown NFTs) uses 25% of sales for buybacks on \$CIRCUS 🔥💰

What are the tokenomics?

[\\$CIRCUS](#) has a maximum supply of 100m. It is fully emitted and minted. There is 0% inflation on [\\$CIRCUS](#) and 50% of the supply was airdropped to 🎪 circus.xpr to further decentralize the supply.

Proton wallet  pbcbank holds the treasury funds for both Proton Baby Clowns and \$CIRCUS.  circus.xpr is owned by Kleist, who will determine distribution of [\\$CIRCUS](#) rewards for Proton Clowns.

25% of Primary Sales generated by Proton Clownverse Collectibles will be used to buy back  [\\$CIRCUS](#) from Alcor at the lowest available market price. [\\$CIRCUS](#) bought back from the market will then be used to reward Proton Clown, Proton Baby Clown and Proton Clown Collectible holders at monthly Clown Parties and during random TG giveaways.
